Product Specification

Golf Course Top Dress

Top Dressing and Seed Cover—Super Nitrolized Screened at 1/8 inch

- **Commonly used for top dressing and seed cover for golf course turf and tee boxes..**
- **Derived from Composting wood shavings, ground arbor wood and biosolids; Blended 50/50 with aged wood fines.**
- **Manufactured at a permitted and regulated composting facility; Manufacturer is a participant in the United States Composting Council “Seal of Testing Assurance” Program.**
- **Particle Size: Screened at 1/8 inch; approximately 90% at 1/8 inch minus and up to 10% up to 1/4 inch.**
- **Suggested application use rate: 1/2 cubic-yard per 1,000 square-feet. Immediately upon completion of spreading application, follow with a thorough irrigation. Irrigate above normal for five (5) days after initial application to settle in application and adequately distribute water soluble nutrients.**

Golf Course Top Dress is simply the best Top Dressing and Seed Cover available in the industry. The product is nutrient-rich (see laboratory analysis) and due to the abundance of nutrients, it is not recommended to add supplemental inorganic fertilizer at the time of initial application and up to 15 days after initial application.
